

Oso Watershed TMDL Roundtable Discussion

January 28, 2008, Texas A&M University-Corpus Christi, Natural Resources Center, Room 1003 from 2-4 pm.

Texas A&M University-Corpus Christi has received funding through the Texas State Soil and Water Conservation Board for a "Study to investigate nonpoint sources of bacteria pollution to support development and implementation of the bacteria TMDL in the Oso Watershed". The focus is primarily on the upper reaches of the creek where consistently elevated enterococci levels have been found in previous studies.

We are soliciting input as we develop a sampling strategy and plan for the project and we would like to invite you to participate in a meeting (round table discussion).

Please RSVP by email if you plan to attend the meeting.
